Patoshi Stake

There are two doors.

Early investors who already hold airdrop tokens enter by token amount. They do not stake with USDT. They acquired their tokens at $0.0005 and $0.001. Their panel balance is fixed.

New buyers who hold no tokens buy from the board at the live price and lock. Their thresholds are in USDT.

The community balance is defined in the tokenomics. At listing, the management team takes 60% of the 40% market supply from the board. Part of that amount is set aside for one year for the stake system and game-linked airdrop amounts. The remainder is untouched. It is locked or burned.

There are three terms. 32 days, 96 days, 192 days. These are 1 month, 3 months and 6 months.

The reward is paid at maturity, together with the principal, in $PATOSHI.

reward = locked tokens × annual rate × days / 365

The annual rate covers a full year. 32 days is 32/365 of that year. An annual 10.75% does not mean 10.75% of the stake in 32 days. On 2,500,000 tokens, that rate pays 23,562 tokens over 32 days.

Early exit is allowed. Principal returns after 3 days. That position’s reward is burned. DAO membership closes immediately. There is no principal haircut. The term does not auto-extend. Only one stake can be open at a time. When a term ends, a new term is chosen.

Early investor

The panel shows the person’s airdrop balance. They pick any amount from 1 token up to their full balance. The screen lists the three terms side by side. Annual rate, the share for that term, and tokens at maturity are shown.

Locking half of the balance or more opens DAO membership. Membership lasts for the chosen term. Choosing 32 days means 32 days of membership and payment on day 32. For 96 and 192 days, membership and payment also land at the end of that term. Locking below half does not open DAO. The reward is still credited.

For an odd balance, half is rounded up.

The annual rate is the sum of four parts.

- Term base: 7% for 32 days, 11% for 96 days, 18% for 192 days
- Early-investor premium: +2.5% on every term

- DAO premium: +3.5% if half or more is locked; otherwise 0
- Size premium follows the locked token amount in the table below

Locked tokens	Extra rate
Below 250,000	+0.25%
250,000 – 999,999	+0.75%
1,000,000 – 4,999,999	+1.25%
5,000,000 – 14,999,999	+1.75%
15,000,000 – 29,999,999	+2.25%
30,000,000 and above	+2.75%

Inside the same band the rate is fixed. Earnings scale with locked amount. When the band changes or the half-line is crossed, the rate itself steps up one tier.

Account holding 35,161,166 tokens

Half is 17,580,583. That half sits in the 15–30 million band. DAO is open. Annual rates are 15.25% for 32 days, 19.25% for 96 days and 26.25% for 192 days.

Lock	DAO	Term	Annual rate	Reward
17,580,583, exact half	Open	32 days	15.25%	235,050
17,580,583, exact half	Open	96 days	19.25%	890,107
17,580,583, exact half	Open	192 days	26.25%	2,427,565
35,161,166, full	Open	32 days	15.75%	485,513
35,161,166, full	Open	96 days	19.75%	1,826,454
35,161,166, full	Open	192 days	26.75%	4,947,610
5,000,000, below half	Closed	32 days	11.25%	49,315
5,000,000, below half	Closed	96 days	15.25%	200,548
5,000,000, below half	Closed	192 days	22.25%	585,205

Account holding 10,000,000 tokens

Lock	DAO	32 days	96 days	192 days
1,000,000	Closed	9,425	38,795	114,411
2,000,000	Closed, same band	18,849	77,589	228,822
5,000,000, exact half	Open	64,658	246,575	677,260

With 1,000,000 locked, DAO is closed. Annual rates are 10.75%, 14.75% and 21.75%. 2,000,000 locked stays in the same band, DAO stays closed, the rate is the same, and the reward doubles. The page rounds to the nearest token, so some rows may differ by 1 token. 5,000,000 locked is half the balance. DAO opens and the band steps up one tier. Annual rates are 14.75%, 18.75% and 25.75%.

Account holding 100,000 tokens

Locking the full balance meets the half rule and opens DAO. Because the amount is below 250,000, the size premium is +0.25%. Annual rates are 13.25%, 17.25% and 24.25%. Rewards are 1,162 tokens over 32 days, 4,537 over 96 days and 12,756 over 192 days.

New buyer

A new buyer buys from the board at the live price and locks.

Minimum amounts for DAO:

- 32 days: 5,000 USDT
- 96 days: 13,000 USDT
- 192 days: 25,000 USDT

The amount is converted to tokens at the board price when the stake opens, then frozen. If price falls later, membership is not broken. Staking below the threshold is allowed. DAO does not open. Earnings still use that buyer's own rate.

Annual rate = term base + DAO premium + size premium. There is no early-investor premium. The DAO premium is +2.5%. Size premium follows USDT size: below 1,000 → +0.25%, then +0.75%, +1.25%, +1.75%. At 25,000 USDT and above → +2.25%.

On a $0.002 board:

Purchase	Term	DAO	Annual rate	Reward
5,000 USDT, 2,500,000 tokens	32 days	Open	10.75%	23,562
13,000 USDT, 6,500,000 tokens	96 days	Open	15.25%	260,712
25,000 USDT, 12,500,000 tokens	192 days	Open	22.75%	1,495,890
1,000 USDT, 500,000 tokens	96 days	Closed	11.75%	15,452
5,000 USDT, 2,500,000 tokens	96 days	Closed	12.25%	80,548

The 96-day DAO gate opens at 13,000 USDT. 5,000 USDT opens DAO for 32 days, not for 96 days.

At the same term and same size, the early investor stays ahead of the new buyer thanks to the +2.5% premium.

Multiplayer Penalty

Everyone who stakes receives stake points. Points scale with the tokens they lock against all current holder balances. They cannot be sold for money. They cannot be cashed out.

The season pool is 1,000,000 stake points (SP). The matching token reserve is 6,000,000 $PATOSHI — paid over 12 months.

points = 1,000,000 × your locked tokens / all holder tokens

A later stake does not claw back points already held. Play keeps moving them. Fields are ordered from low points to high points. Two people sit on the same field. The field's points are the minimum required to sit there. Someone with 3,000 points and someone with 4,000 points can both sit on a 50-point field and on a 3,000-point field. Neither can sit on a 3,001-point field.

The winner takes the field’s points from the loser. Five percent of that transfer goes to the Patoshi house. On a 500-point field the loser gives 500, the house takes 25, and the winner banks 475.

The Patoshi house sits in the month-end ranking with whatever points it holds. Points stay while the stake stays open. If you unstake, your points move to the house. A restake is granted again from remaining house points, sized to the new lock.

For 12 months, ranking uses current stake points at month end. That month’s airdrop is 500,000 $PATOSHI — 6,000,000 / 12 — written in proportion to points held that day, including the house.

monthly airdrop = 500,000 × your points / all held points

If you have 10,000 points and held points are 1,000,000, you receive 5,000 tokens that month. Completing a month keeps the tokens already written. Unstaking later only moves remaining points, not tokens already paid.

Reserve

Total supply stays at 1 billion. Rewards are not newly minted.

The annual stake reward is 50,000,000 $PATOSHI. The penalty airdrop is a separate 6,000,000 $PATOSHI — 500,000 tokens each month for 12 months. Both come from the tokens the management team took from the board. When a stake opens, that term’s reward is reserved from the 50 million. If the reserve is insufficient, that entry is rejected. Published rates are never cut after the fact.
